

Mr Bubbles — Phomemo M220 Quick Start (Drivers)

Use this guide to pair your M220 Bluetooth label printer and print bag QR labels directly when accepting an order.

1) *What You Need*

- iPhone/Android with Bluetooth on.
- M220 printer charged and loaded with adhesive label roll.
- Mr Bubbles Driver app (or web app) logged in.

2) *Pair the Printer*

1. Power on the M220.
2. Go to your phone's Bluetooth settings and pair with the printer (it appears as "M220 ...").
3. In the Driver app, open *Printer* in settings and select the paired device.

3) *Calibrate & Test*

- Set the label **width/height** to match your roll (e.g., 50x30 mm).
- Print a test label to confirm alignment and QR scannability.

4) *Printing Labels During Pickup*

1. Tap **Accept Order** → enter **number of bags**.
2. Tap **Print Labels**. The app prints one label per bag (Bag 1 of N, 2 of N, ...).
3. Stick labels on each bag before leaving the customer.
4. At the shop, scan each bag to check in. At delivery, scan again to complete.

5) *Troubleshooting*

- If the printer isn't found: ensure Bluetooth is on and printer is awake.
- If labels misalign: re■set label size and re■calibrate.
- If QR won't scan: increase print density slightly and reprint.
